FLOW

Motion Activated Single-Handle Pull-Down Sprayer Kitchen Faucet in Brushed Nickel

Dimensions

Connection size (in.)	3/8 In.	Extended Hose Length (in.)	12
Faucet Height (in.)	15.5	Spout Height (in.)	15.5

Details

Cartridge Valve Type	Cartridge Faucets	Color Family	Nickel
Color/Finish	Brushed Nickel	Commercial / Residential	Residential
Deckplate Included	Deckplate Included	Faucet Hole Fit	1,3
Faucet Hole Spacing (in.)	No Spacing - Single Hole	Faucet Type	Pull Down
Features	Advanced Spray,Pull Out Spray Wand,Secure Docking	Finish Family	Brushed Nickel
Flow rate (gallons per minute)	1.8	Hub Required	No hub connection available
Included Components	All Mounting Hardware,Faucet Adaptor,Fittings,Supply Lines	Material	Nickel
Mount Location	Deck Mount	Number of Faucet Handles	Single Handle
Power Options	Plug-in	Remote Access	No Remote Access
Requires Hub?	No Hub Required	Returnable	90-Day
Sensor Activation	Touchless	Smart Home Protocol	Proprietary Protocol
Spout Reach (in.)	8.5 in	Spout Swivel Type	180 Degree Spout Swivel
Style	Coastal,Transitional	Valve material	Ceramic
Voice Control Hub Required	No Voice Control	Works With	No additional compatibility

Warranty / Certifications

Certifications and Listings	IAPMO Certified,NSF Certified,NSF Listed	Manufacturer Warranty	5 Year

Magic Faucet

That's the name given by my grandkids.It was easy to install, a nice clean look, and its motion activated. It's powered by 4 AA batteries. I will highly recommend the Flow Motion Activated Faucet to anyone in the market for a new kitchen faucet. There is also a manuel override to the motion sensor.

by Tata

★★★★★

Feb 19, 2022

Love it

This faucet looks sleek and beautiful in our kitchen, and the motion sensor is much more intuitive than I was expecting, which I'm happy about since it's my first motion activated faucet. Very happy! I installed all myself, so that means anyone can!

by Sara

Visual-based Recommendations

Why

Help customers explore aesthetically similar products. It solves the cold start problem for new products and promotes visual-based exploration of the catalog.

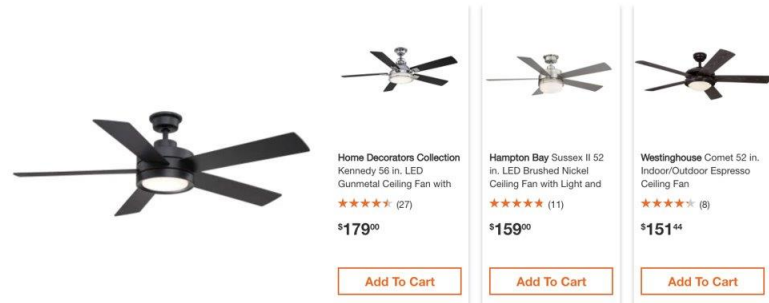

More Like This

A grid of four table lamp products. The first product is a large lamp with a dark base and a light-colored shade. The other three are smaller lamps with various bases and shades. Each product has a description, a star rating, a price, and an 'Add To Cart' button.

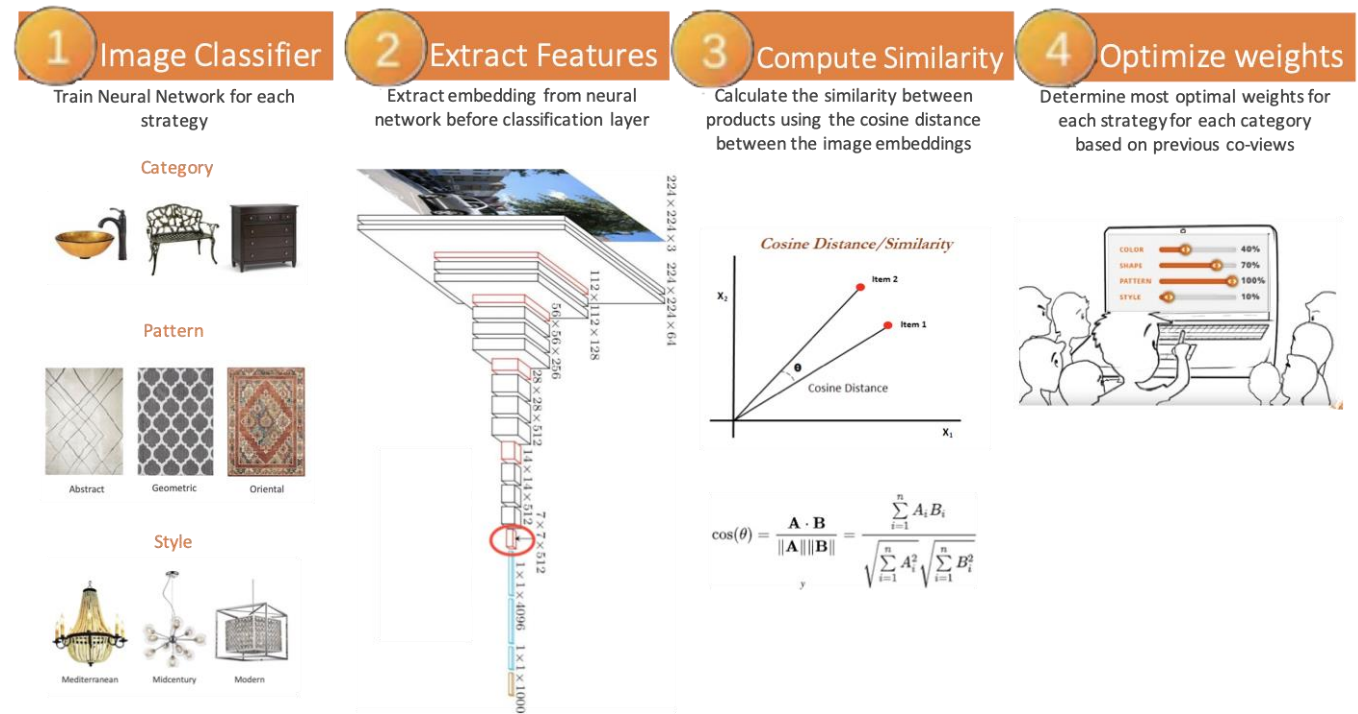

- Decor Therapy Carved 25 in. Silver Table Lamp with Cotton Shade**: 5 stars (23), \$36³²
- Decor Therapy Verdi 25 in. Cream and Brown Table Lamp with Faux Silk Shade**: 5 stars (8), \$36¹⁸
- StyleCraft 30 in. Toffee Wood Table Lamp with White Fabric Shade**: 5 stars, \$78⁰⁰

More Like This

A grid of four ceiling fan products. The first is a large, dark-colored fan with multiple blades. The other three are smaller fans with different designs. Each product has a description, a star rating, a price, and an 'Add To Cart' button.

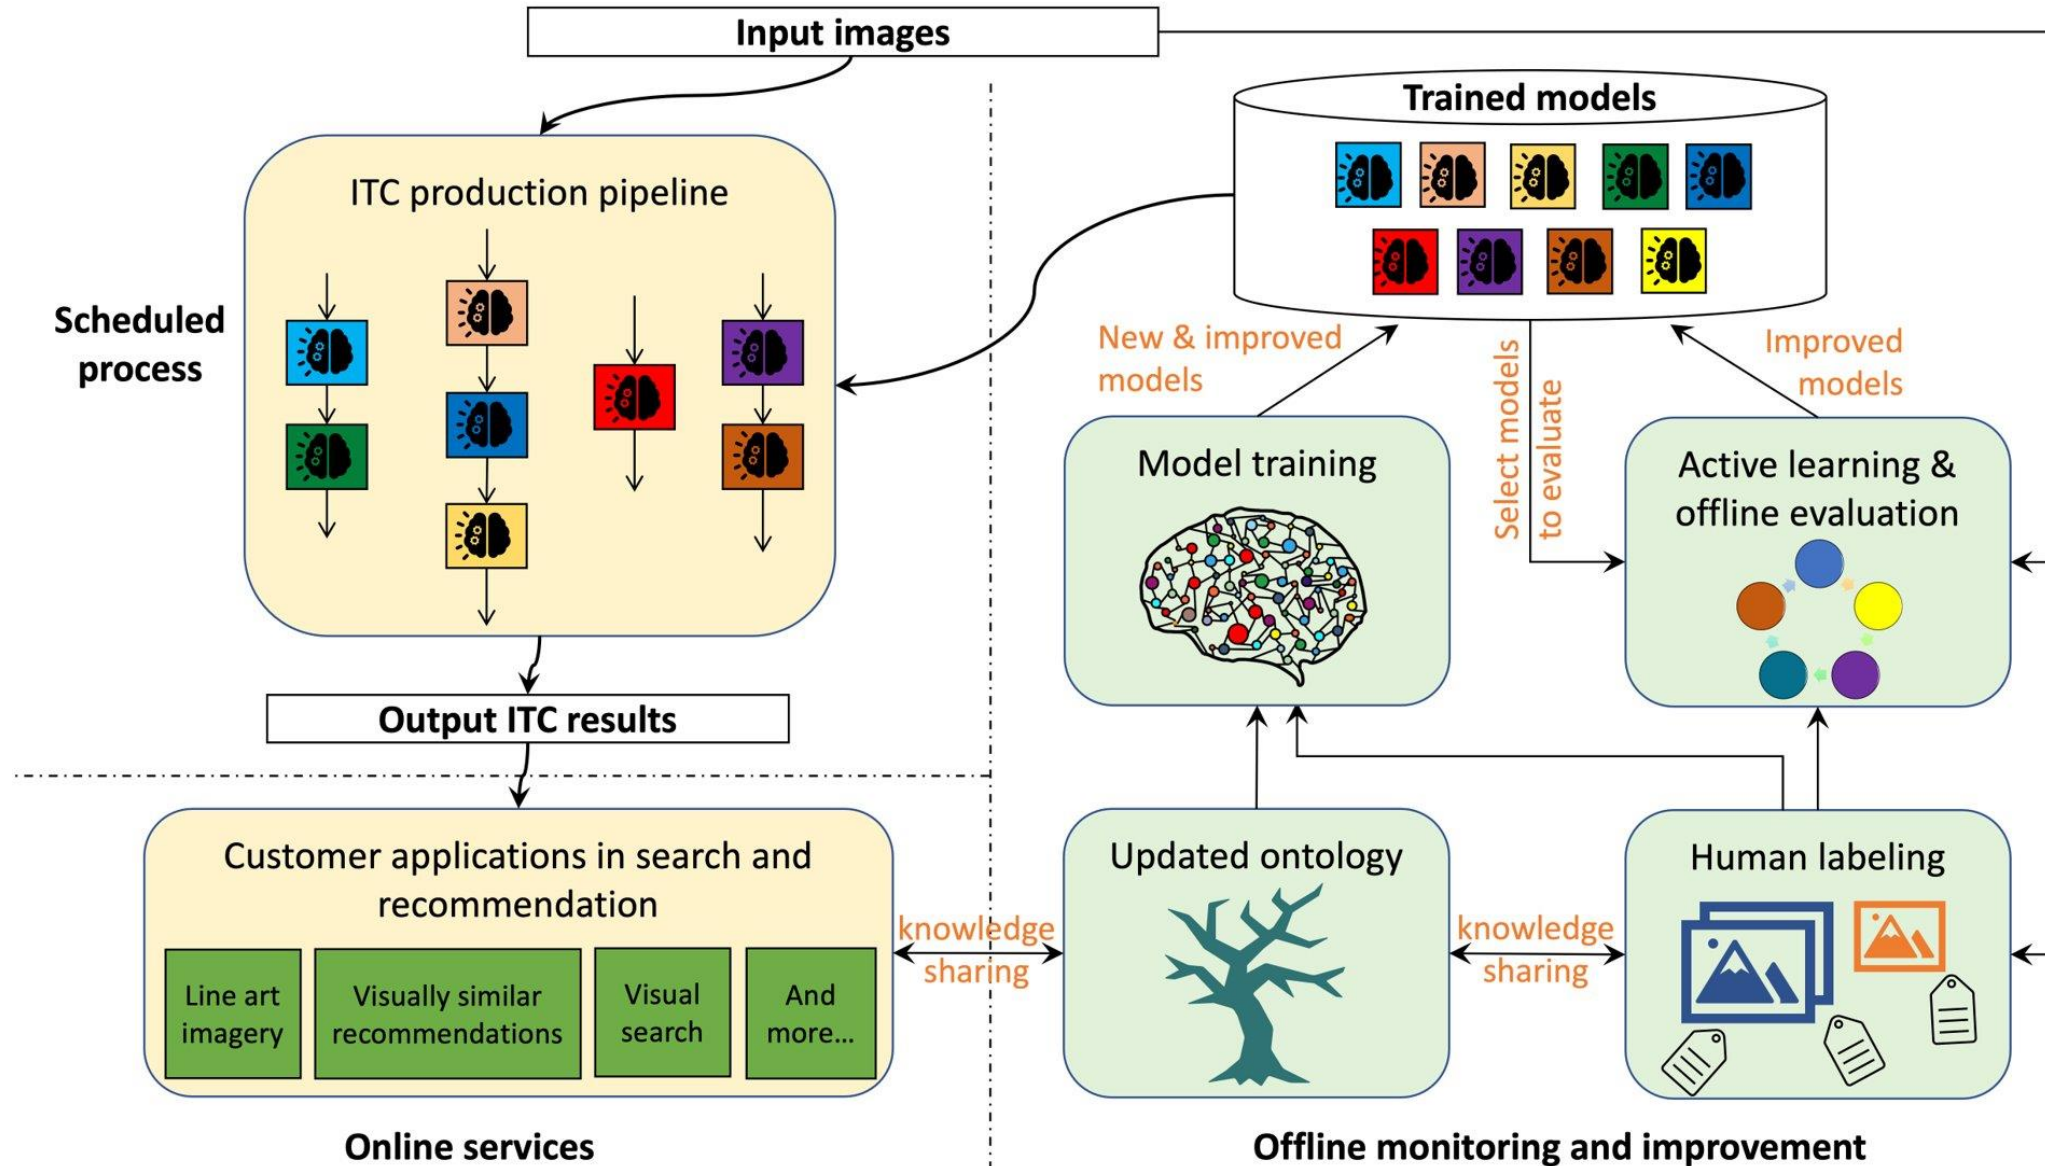

- Home Decorators Collection Kennedy 56 in. LED Gunmetal Ceiling Fan with Light**: 5 stars (27), \$179⁰⁰
- Hampton Bay Sussex II 52 in. LED Brushed Nickel Ceiling Fan with Light and**: 5 stars (11), \$159⁰⁰
- Westinghouse Comet 52 in. Indoor/Outdoor Espresso Ceiling Fan**: 5 stars (8), \$151⁴⁴

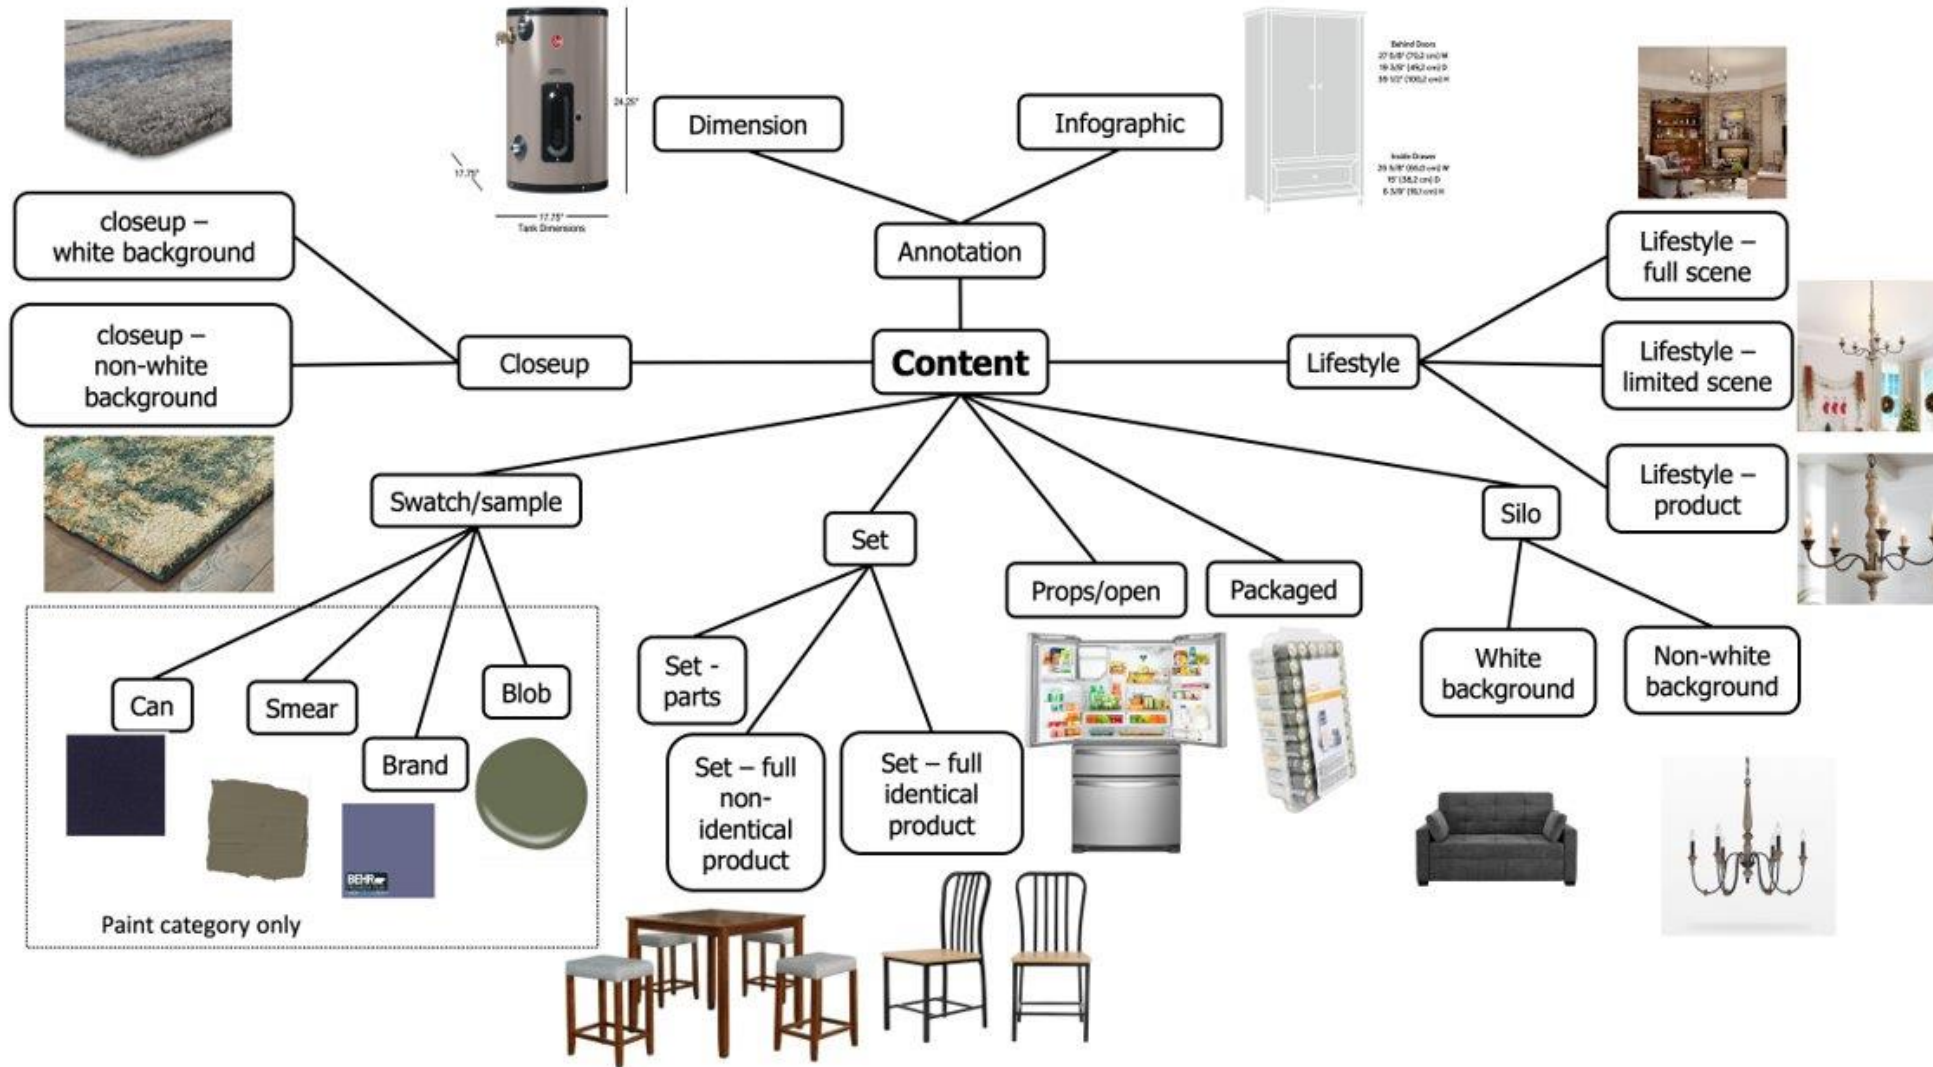

$$\cos(\theta) = \frac{\mathbf{A} \cdot \mathbf{B}}{\|\mathbf{A}\| \|\mathbf{B}\|} = \frac{\sum_{i=1}^n A_i B_i}{\sqrt{\sum_{i=1}^n A_i^2} \sqrt{\sum_{i=1}^n B_i^2}}$$

Production Pipeline

Extract Features

Fine tune a convolutional network with our own product images and freeze and chop layers to build a visual similarity model

Scaling Visually Similar - Approximate Nearest Neighbor

- The output of the CNN model is an embedding vector for each product image
- To find the best matching products, the cosine similarity is computed between embedding vectors – a k nearest neighbor search problem
- Home Depot has Millions online products - requires matching $M \times M$ products – trillion pairwise comparisons
- Instead we use an **approximate** KNN search algorithm that sacrifices some accuracy for speed
- We evaluated 3 different approximate KNN libraries:
 - FAIS - <https://github.com/facebookresearch/faiss>
 - ANNOY - <https://github.com/spotify/annoy>
 - NMSLIB - <https://github.com/nmslib/nmslib>
- We found NMSLIB to produce the best accuracy – speed tradeoff, over 2X the speed of ANNOY, and up to 50X faster than brute force
- Using NMSLIB we can generate recommendations for Millions products within a couple of hours

Collection Recommendations*

Problem

- Customers needs a more convenient way to find products that form a collection
- Manual process is error-prone and not scalable

Goal

- To automatically discover *relevant* products that form a collection with a given anchor

Coordinating: Relevant and Complementary

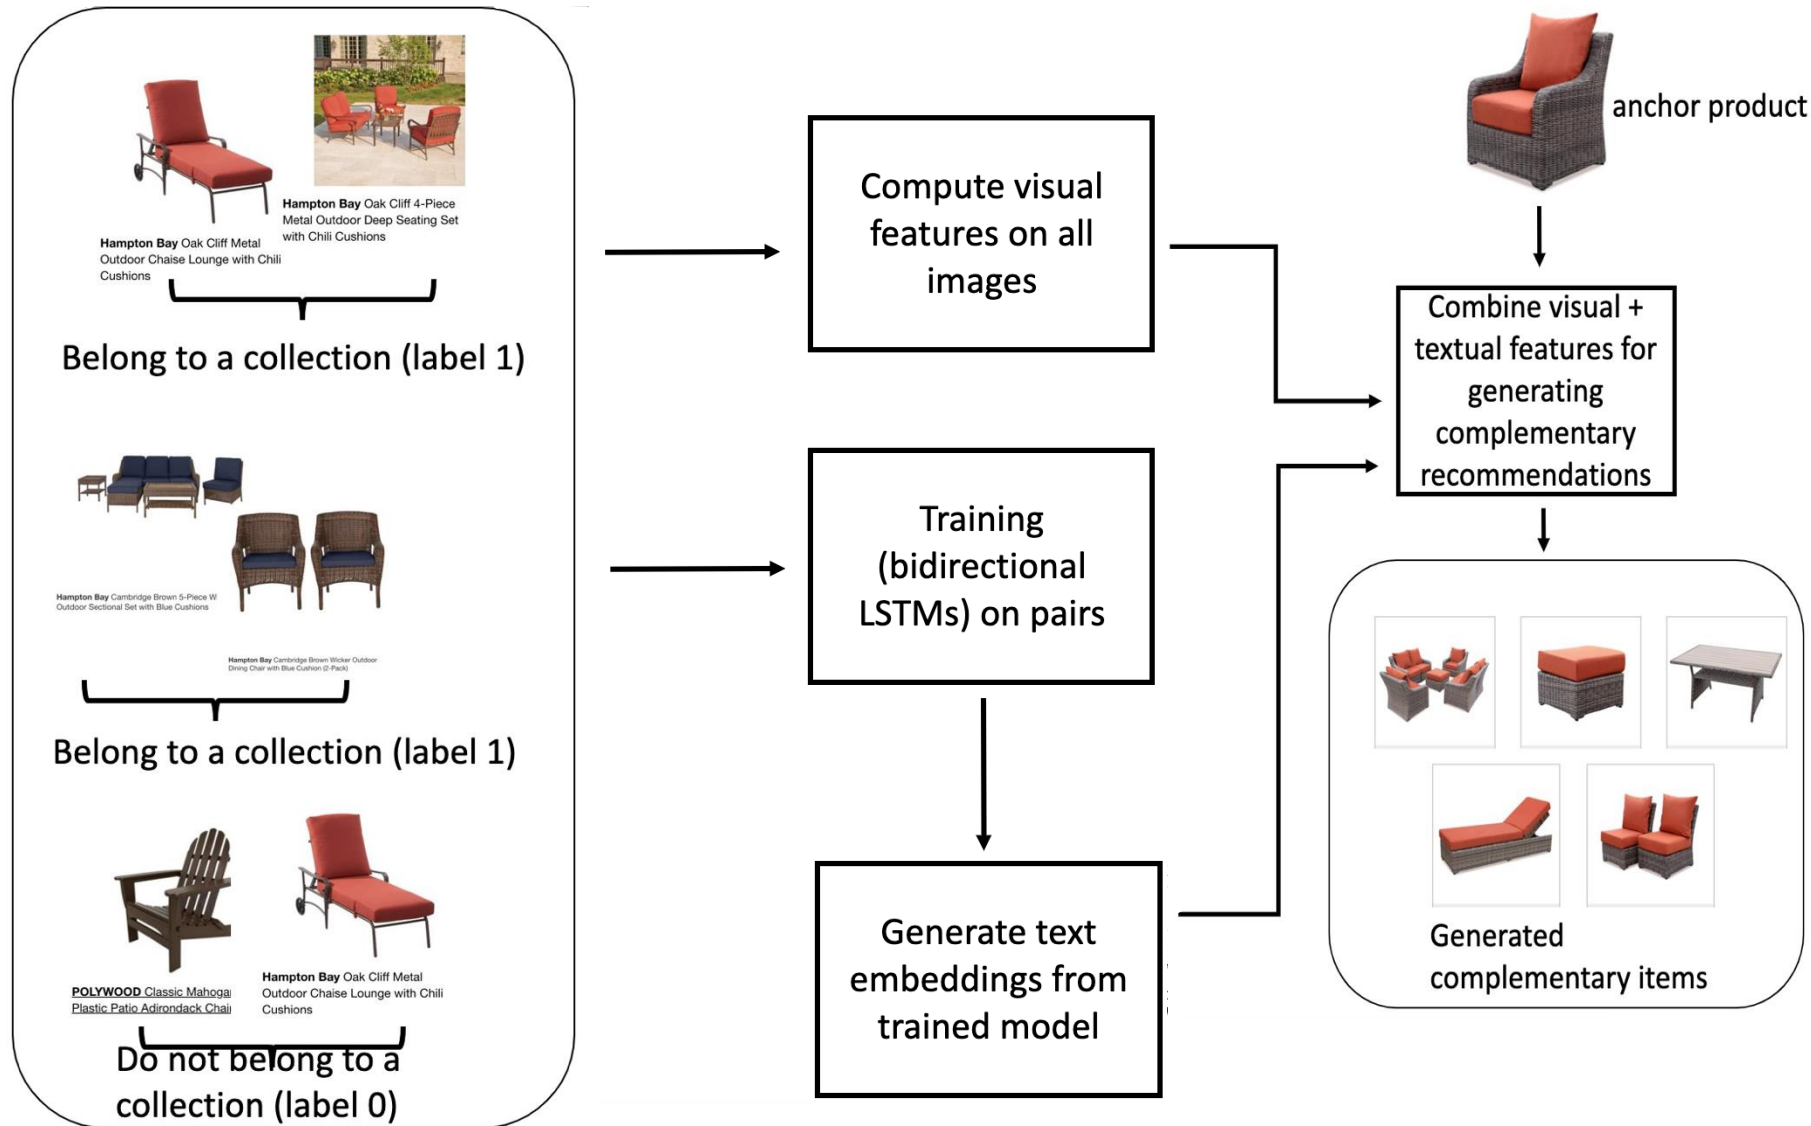

- **Collection** = textual relevance and visual similarity
- For a bath faucet, all recommended items must be:
 - Relevant to bath
 - Visually coordinated (color, style etc.)
 - Diverse!
- How to supervise such a model?
 - Manual Collections!

Approach for Generating Collection Recs

Siamese Deep Learning Network for Coordinating Items

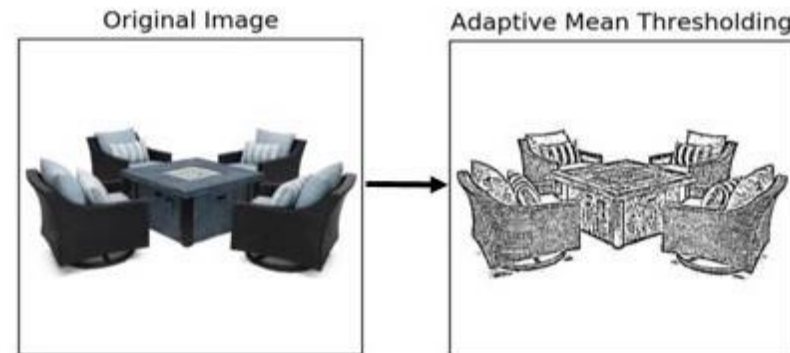

Visual Features: Color Histograms

- Color Histograms
 - Binned pixel intensity values for Red, Green, Blue (RGB) channels
- Why color histograms?

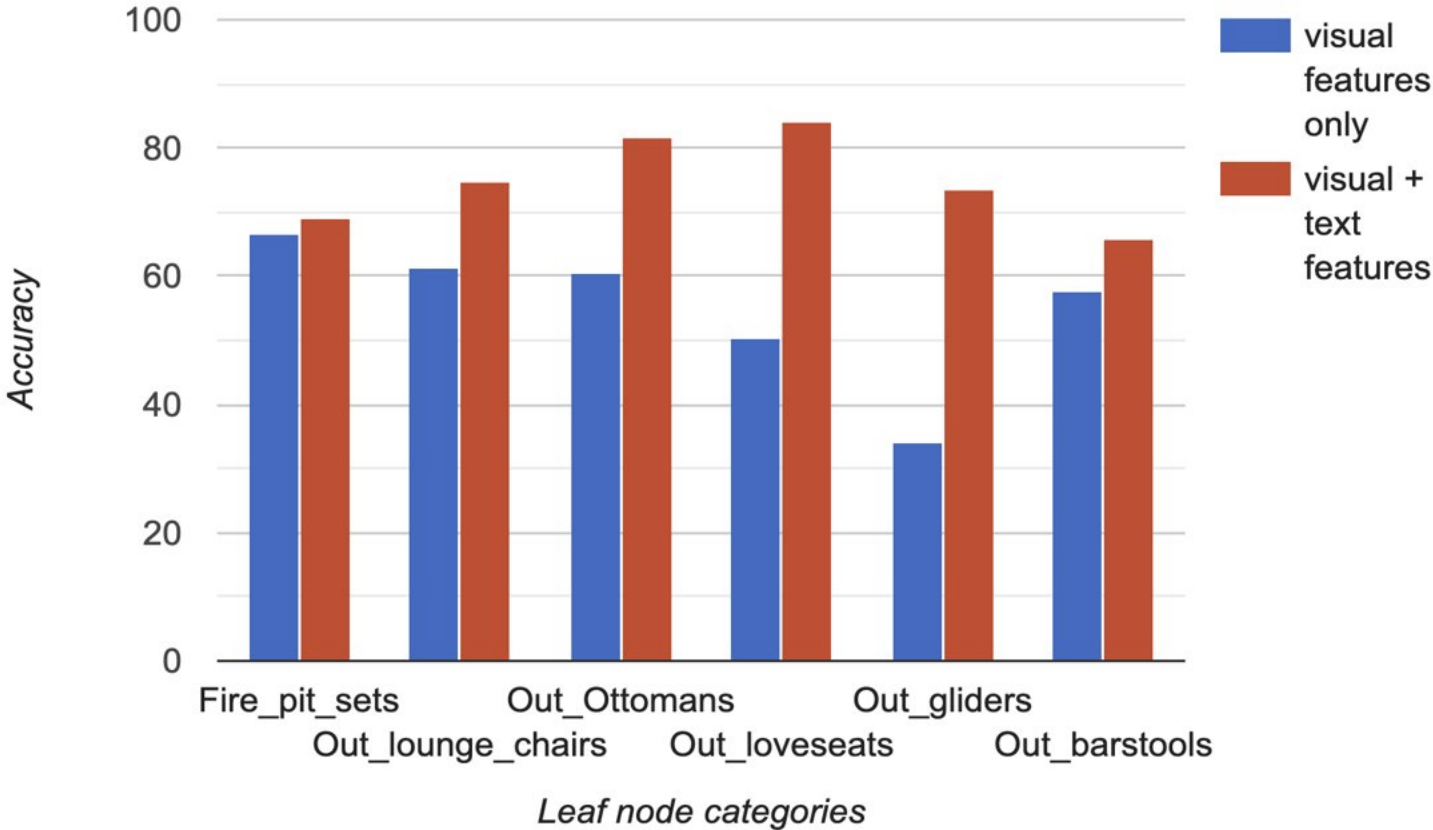

Result from state of the art deep network pretrained on ImageNet

- What to do about background?
- Mean Adaptive Threshold
 - Thresholds an image and extracts only the foreground
 - We compute color histograms on the foreground only

Joint Approach Outperforms Visual Only Approach

Patio Dataset

Combining Visual and Textual Features with Weights

- Given an anchor text embedding:
 - Compute a large list of **candidate recs** based on textual cosine similarity
 - Keep the cosine similarity scores (let's call each score *score_text*)
 - Given the same anchor's color feature vector
 - Compute the cosine similarities with all the recs within **candidate set**
 - Keep the cosine similarity scores (let's call each score *score_color*)
 - Combine the scores using weights and sort:

$$combined_score = w_1 \times score_text + w_2 \times score_color$$

- Pick the top “m” as final recs

Extract facets from unstructured product attributes

Incorporate customer search trends

One-stop free-form searchable filter across several dimensions

Keyword Extraction

- Extract keywords from product meta data
 - Title, Description, Highlights, Bullets
 - Define POS patterns of interest

POS Patterns
$(\langle JJ.?\rangle \langle NN.?\rangle)? \langle VB[^Z]^+\rangle \langle NN.?\rangle^+$ (extracts adjective, noun and verb combinations)
$\langle NN[^S]^?\rangle? \langle JJ.?\rangle^+ \langle NN[^S]^?\rangle^* \langle NN.?\rangle$ (extracts noun and adjective combinations)

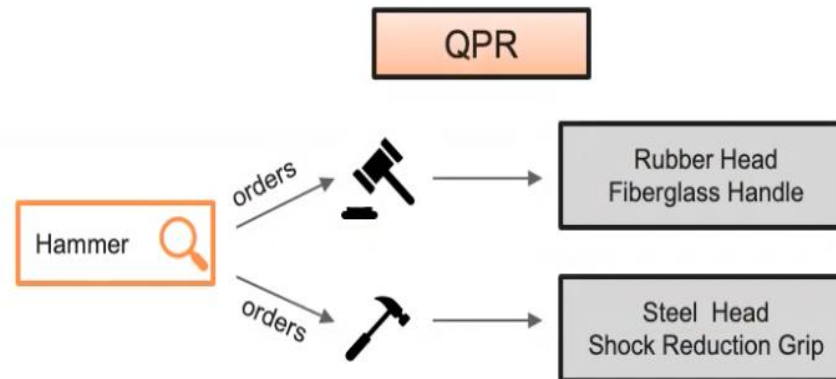

- Keyword cleaning
 - TF-IDF – remove insignificant keywords
 - Limit keyword length between 2 and 5
 - Light deduplication

POS-Tagged Sentence with Keywords											
This	high-performance	finish	has	a	5-year	warrant	and	is	resistant	to	fading
DT	JJ	NN	VBZ	DT	JJ	NN	CC	VBZ	JJ	TO	NN
For	removing	water	from	flooded	basements,	boats,	low-lying	collection	spots		
IN	VBG	NN	IN	JJ	NNS	NNS	JJ	NN	NNS		

Methodology

- Filter and Rank keywords for each search term
 - Aggregate all keywords from all products for a search term
 - Use customer search behavior to filter and rank keywords
- Query – Product Relevance

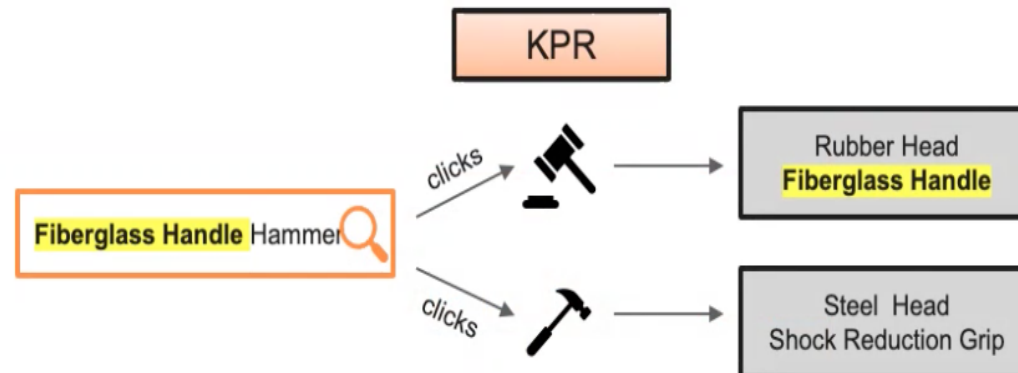

$$QPR(Q, P) = \frac{Orders(Q, P)}{\max(\{Orders(Q, P_i) : \forall P_i \in P_i^Q\})}$$

Methodology

- Keyword – Product Relevance
 - Hypothesis: **Customers would often include the key product feature they are looking for, right within their search query**

$$KPR(K, P) = \frac{Clicks(Q^K, P)}{\max(\{Clicks(Q^{K_i}, P) : \forall K_i \in F_P\})}$$

- Final Score $rank(K, P, Q) = \alpha \cdot KPR(Q, P) + (1 - \alpha) \cdot QPR(K, P)$

Methodology

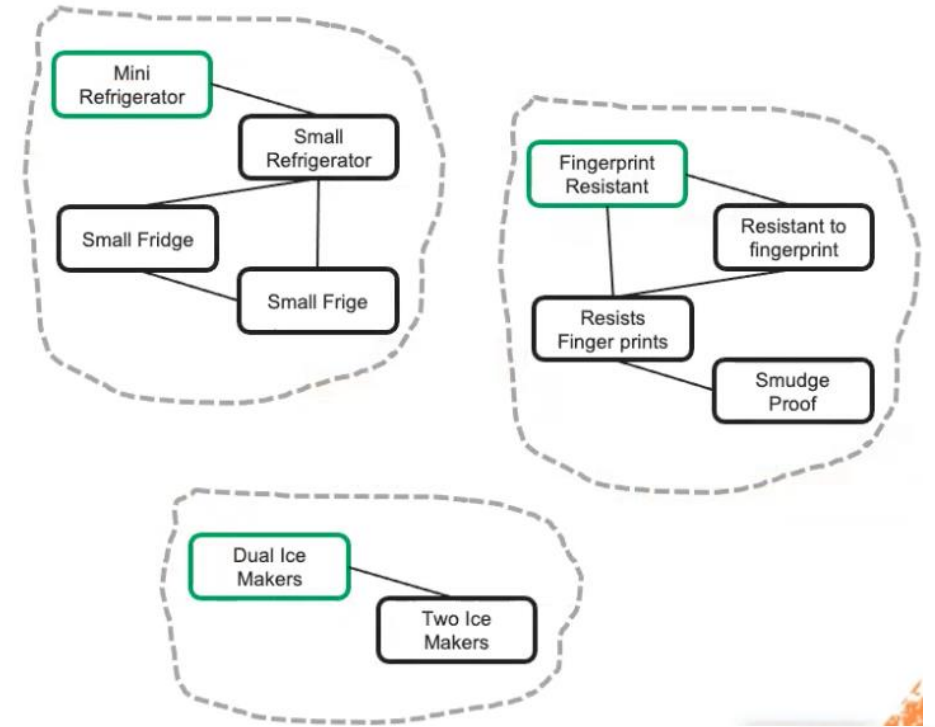

- Remove Duplicates
 - Define pairwise-similarity for top-k keywords per search term

$$Sim_{lexical}(K_i, K_j) = \frac{|Tokens(K_i) \cap Tokens(K_j)|}{|Tokens(K_i) \cup Tokens(K_j)|}$$

$$Sim_{semantic}(K_i, K_j) = Cosine_Sim(V(K_i), V(K_j))$$

$$Sim(K_i, K_j) = \beta \cdot Sim_{lexical}(K_i, K_j) + (1 - \beta) \cdot Sim_{semantic}(K_i, K_j)$$

- Connected Components to form clusters
- Choose keyword with min(rank) as cluster representative

Experiment and Results

- Conducted A/B test for 2 weeks
- Metrics measured

$$\text{Engagement} = \frac{\text{Number of sessions with a click on the facets}}{\text{Total number of sessions}}$$

+ 2%

$$\text{Average Order Value} = \frac{\text{Total Revenue}}{\text{Total number of orders}}$$

+ 2.9%

$$\text{Revenue Per Visit} = \frac{\text{Total Revenue}}{\text{Total number of sessions}}$$

+ 3.6%

Product Review Summarization

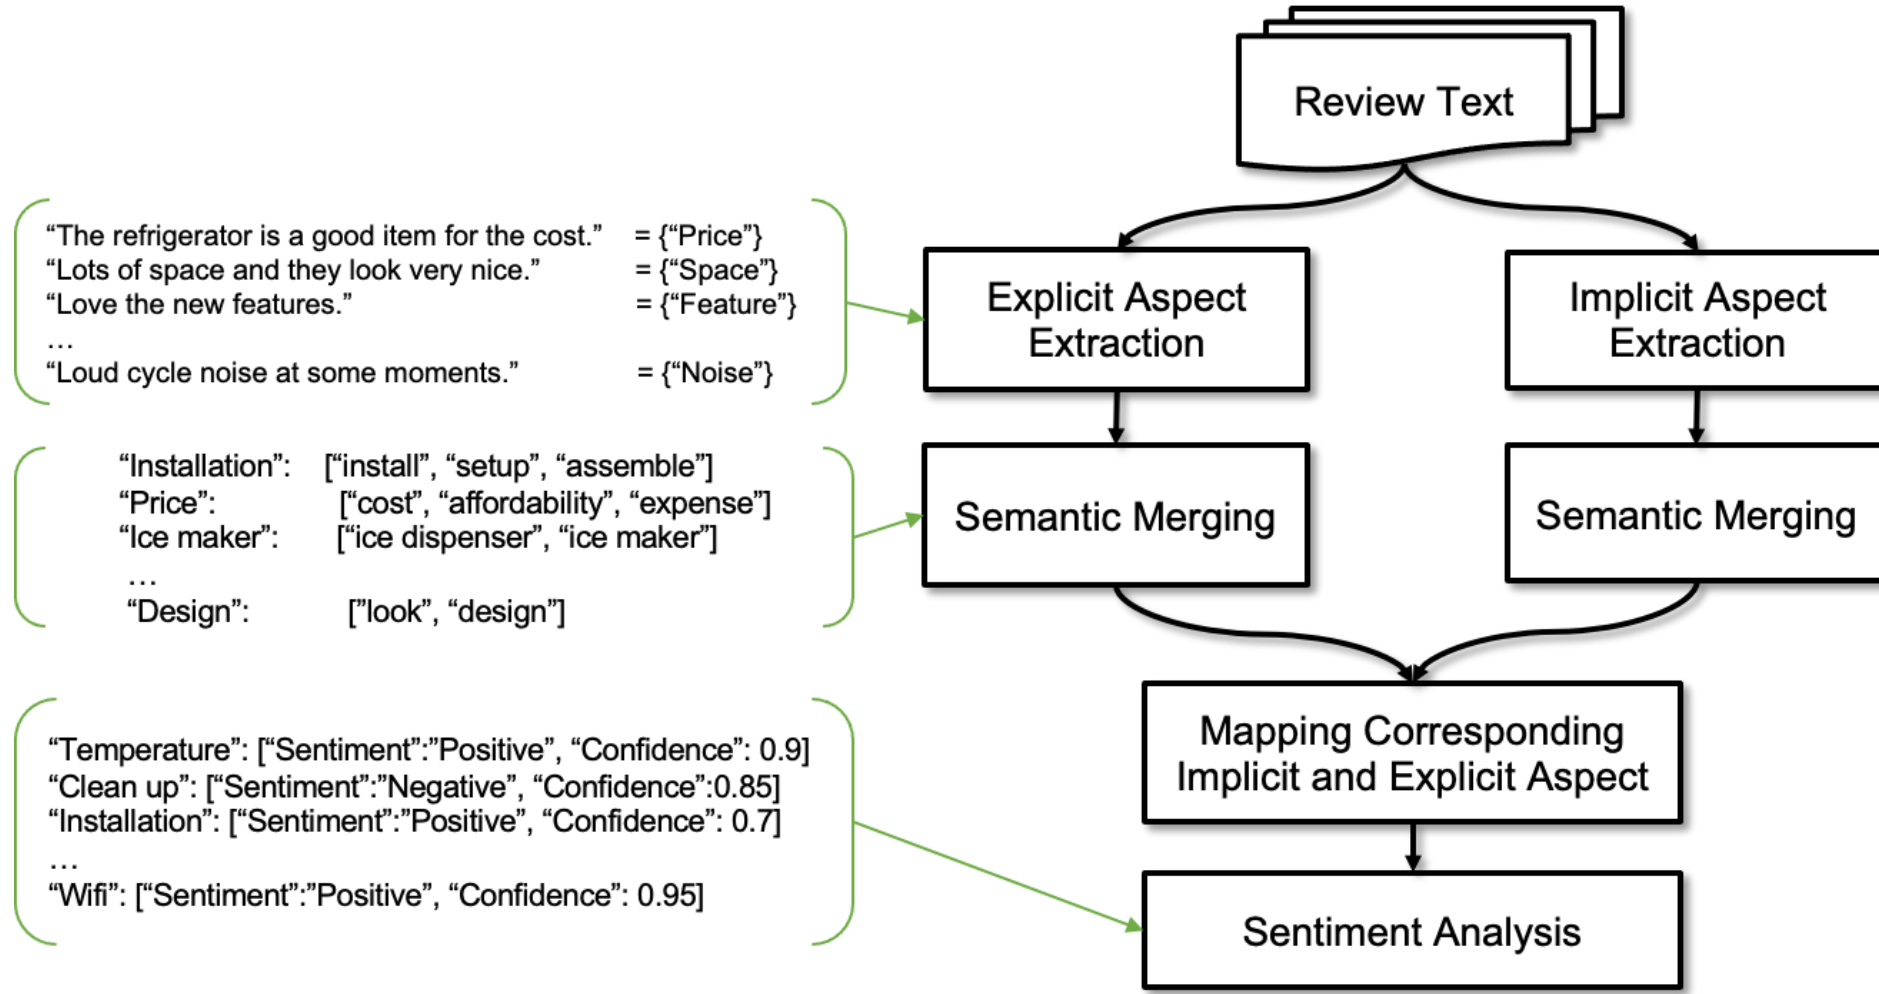

- Improve readability of reviews which accumulate to an enormous amount.
- Identify key themes in our product reviews that we can extract and surface to the customers.
